AMERICHEM INTRODUCES VERSATILE eCAP™ HIGH-PERFORMANCE COMPOUNDS FOR BUILDING PRODUCTS APPLICATIONS

CUYAHOGA FALLS, OHIO (FEBRUARY 27, 2014) – Americhem Inc., a global provider of custom color and additive solutions for polymer-based products, introduces eCap™ high-performance compounds, the next evolution of enhanced pre-color capstock compounds for decking, fencing and other building products applications.

eCap is engineered to provide convenience and versatility to profile extruders with its ability to be customized to improve the performance of building products. Available in a variety of material blends, including PVC, ASA, PMMA, PE, and others, eCap high-performance compounds allow customers to select key attributes required for the desired aesthetic and physical performance for every application.

“We’re excited to continue to expand our core competencies with the next evolution of capstock compounds for co-extruded profile technologies,” said Mike Fair, Americhem’s market segment manager for architecture. “Our new eCap high-performance compounds provide our customers with the same quality they’re used to receiving with our masterbatch products, but with the convenience of a compound.”

All eCap products feature highly weatherable color, enhanced dimensional stability and outstanding durability. The compounds can be formulated for impact resistance, scratch and mar endurance, adhesion of cap to substrates, improved resistance to moisture whitening and the potential for a Class A fire rating. eCap solutions can also be combined with Americhem’s nGrain® simulated woodgrain effects for a natural aesthetic in combination with eCap’s other key attributes.

For more information about eCap high-performance compounds, contact Scott Blanchard at sblanchard@americhem.com.
