TECHNICAL CENTRE BENEFITS AUTOMOTIVE CUSTOMERS WITH WEALTH OF SERVICES

MANCHESTER, UNITED KINGDOM (May 24, 2016) – Americhem Europe Ltd., a global provider of colour and additive solutions, is highlighting its Manchester, United Kingdom, technical centre at the Automotive Interiors Expo (AIX) in Stuttgart, Germany, 31 May–2 June. The facility gives customers the opportunity to develop products during a short visit and gives auto interior component producers access to the finest testing, research and product development expertise.

“Our technical centre features modern equipment designed to assist our customers in their technical challenges,” stated Michael Frisch, Americhem’s EMEA technical director.

The centre houses a fully equipped pigment lab which includes specialty equipment for fibre and automotive products. The fibre capabilities include two spinning lines, one low speed spin line for nylon and polypropylene products and a low/high speed line that covers the same polymers, plus PET. Some of the many capabilities for automotive producers include several injection moulders and a Battenfeld BA100 CDC mouler.

The centre is dedicated to customer service and can turn around samples for customers in two weeks’ time or less. Customers can take advantage of the many analytical capabilities available including a Delta-P tester, a melt flow test, FT-IR and a moisture analyser. The lab can also perform 5-finger scratch tests and high impact testing.

In addition to the resources of the centre, customers in the Europe, Middle East and Africa (EMEA) region receive the full backing of Americhem’s global network of plants, as well as the company’s world headquarters and central research and development facility in Cuyahoga Falls, Ohio, U.S.A.

Learn more about Americhem’s technical centre and testing capabilities at the upcoming 2016 Automotive Interiors Expo, being held 31 May–2 June in Hall 3, Stand A5132 or contact Scott Blanchard at sblanchard@americhem.com.
