

## **NPE2018 ATTENDEES TO EXPERIENCE AMERICHEM'S ECAP PRECOLOR CAPSTOCK PRODUCTS FIRSTHAND**

**CUYAHOGA FALLS, Ohio (April 5, 2018)** – [Americhem](#), a globally recognized designer and manufacturer of custom color masterbatch, functional additives, engineered compounds and performance technologies, will be displaying its full line of eCap™ high-performance precolor capstock compounds at the upcoming NPE 2018 tradeshow, taking place from May 7–11 in Orlando, Florida. Attendees can get an up-close look at these materials—designed to provide convenience and versatility in the manufacturing of decking, fencing and other extruded profiles—at Booth S17031 on the tradeshow floor.

Americhem will be showcasing eCap capstock compounds comprised of PVC, ASA and PE at the show. Each of these distinct product lines offers a mix of enhanced dimensional stability, outstanding durability and aesthetic appeal, allowing customers to choose the best solution to suit their base resin preference. Each polymer type offers its own set of benefits for extruded material production:

- PVC-based capstock offers significantly enhanced weatherability, gloss reductions and the ability to harness the benefits of PVC in darker color spaces
- PE-based capstock offers gloss reduction, weatherability and scratch resistance
- ASA-based pre-color compounds are available in low volumes, which is unique to Americhem

“Our eCap product allows customers to offer a more realistic wood appearance, darker colors, better weathering and durability while working with their preferred base resin,” explains Mike Fair, Americhem’s market segment manager for architecture. “eCap can also help end-use products achieve better impact resistance, improved resistance to moisture whitening, scratch and mar resistance, adhesion of cap to substrates, and potentially a Class A fire rating, helping customers’ products stand out in the marketplace.”
