In celebration of Engineering Week, we are delighted to shine a spotlight on our exceptional engineers whose dedication, expertise, and passion for innovation continue to drive Americhem's success forward.

This engineering department, who is made up of Joe Vlosich, Dane Pownall, Craig Dennis, Doug Smith, and Jessie Chamberlin is designed to handle multiple disciplines within the field of engineering. It is their responsibility for designing, developing, maintaining, overseeing, and supporting all levels of our production systems and infrastructures. The Americhem engineering department lives by the following code "Dedicated to Excellence from the Beginning." This guiding principle reflects their unwavering dedication to delivering exceptional quality and performance in all our standards of work.

In addition to their central group, they work closely with the plant maintenance departments that play a vital role in ensuring the ongoing reliability and efficiency of Americhem's systems. Their expertise in daily and routine inspections, troubleshooting, and timely repairs enhances the overall performance and longevity of our engineering solutions and plant operations.

One main theme that the engineering team lives by is safety. Having a safety-first mindset allows Americhem to maintain a safe environment that is vital for the well-being of all employees around us and the success of our endeavors.

Please welcome us in giving a huge thank you to the engineering department!
