

How to color a sustainable natural filled compound...

Americhem has the solution

Sustainable natural filled compounds are becoming more and more popular in the automotive industry due to their environmentally friendly and green impact they have on the manufacturing process of a car. OEM's are looking for different ways to incorporate these sustainable products into their car parts, but often struggle with coloring these materials.

Americhem has developed expertise in coloring natural filled compounds. Some of these sustainable materials that we have worked with so far are:

- Rice hulls
- Coconut
- Wood flour
- Wheat straw
- Cellulose
- Flax
- Pecan shells
- Sisal

If you're looking for a compound or masterbatch with color and/or UV additives to pair with your natural filled compound, Americhem has the solution for you.
